```scala
object FindDifferenceBetweenMapsExample {
  def main(args: Array[String]): Unit = {
    // Create two maps
    val map1 = Map("Red" -> 1, "Green" -> 4, "Blue" -> 2, "Orange" -> 3)
    val map2 = Map("Red" -> 5, "Green" -> 4, "Blue" -> 2, "Pink" -> 3)

    // Print the original map
    println("Original map1: " + map1)
    println("Original map2: " + map2)
    // Find the difference between the maps
    val difference = map1 -- map2.keySet
    // Print the result
    println(s"The difference between the maps is: $difference")
  }
}
```

STDIN

Input for the program ( Optional )

Output:

```
Original map1: Map(Red -> 1, Green -> 4, Blue -> 2, Orange -> 3)
Original map2: Map(Red -> 5, Green -> 4, Blue -> 2, Pink -> 3)
The difference between the maps is: Map(Orange -> 3)
```
